

A night sky with the Milky Way galaxy, a red tent, and a white circular graphic. The Milky Way is visible as a bright, hazy band of light across the dark blue and black sky, filled with numerous stars. In the foreground, the dark silhouette of a forest line is visible against the horizon. A red tent is illuminated from within, casting a warm glow. A large white circle is superimposed over the scene, containing the text. Three white starburst graphics are placed at the top, bottom, and right of the circle.

PROTECT THE NIGHT

## DARK SKY CAMPING GUIDELINES

Use light responsibly to minimize the impact on your surrounding environment and to make camping an enjoyable experience for all.

- \* Light your site, not the night.
- \* Shield your lights and point them down.
- \* Use warmer color light (like red light) if light is needed.
- \* Avoid unneeded and excessive light (such as decorative lighting, landscape lighting, string lighting, etc.).
- \* Consider stargazing as an alternative to a campfire.
- \* Refrain from driving in the camping areas from dusk to dawn.
- \* When it's after dark... Lights off, STARS ON!
